

User feedback for Medicrecall

We demonstrated our app to a student in early Easter, consulting their feedback on the current version of the app. This was so that we could gain an insight into how they thought the app could be improved, and also what they had enjoyed about it.

User 1 - Hugo, Student:

Pros:

- The simplistic layout makes the application very approachable to new users.
- The integration of the calendar is very useful and easy to use, as you can prepare for your revision in advance.

Cons:

- Allow for dark mode in the app
- Let the user advance the flashcards with the arrow keys if you are using the web app
- Let the user log-in with different social media than just google and email.
- Have the MCQ section allow for multiple choices, rather than one

As a result, we implemented dark mode and modified the MCQ section within the app. The 2 other suggestions were taken on board, but unfortunately were not implemented right now, as they are more features rather than necessary implementations.
